ASBESTOS TESTING

Standard 0.5%

Sample Description: (List all samples submitted for analysis)	Test all layers separately. ³⁾	Notes: (Any additional information or requests)
	<input type="checkbox"/> No <input type="checkbox"/> Yes	
	<input type="checkbox"/> No <input type="checkbox"/> Yes	
	<input type="checkbox"/> No <input type="checkbox"/> Yes	
	<input type="checkbox"/> No <input type="checkbox"/> Yes	
	<input type="checkbox"/> No <input type="checkbox"/> Yes	
	<input type="checkbox"/> No <input type="checkbox"/> Yes	
	<input type="checkbox"/> No <input type="checkbox"/> Yes	

Notes: 1) The sample will be tested and analyzed using the National Institute of Occupational Safety & Health (Niosh) 9002 method. This method utilizes Polarized light microscopy to analyze samples 100-200 times and is capable of detecting Chrysotile, Amosite, Tremolite, Crocidolite, and other variations of asbestos fibres. This is our default test method. 2) By default we select "NO" as an answer. If you need a separate analysis of all layers, please select "Yes". Please identify which layers should we test, like "vinyl tile, adhesive". Please note each layer that was analyzed separately will be invoiced as a separate sample.
